

Diagnose and rectify light vehicle combustion engine and component faults

Overview This standard is about diagnosing and rectifying faults occurring in the vehicle combustion engine's mechanical, electrical, hydraulic and fluid systems.

Performance		
criteria		
You must be able to:	P1	use suitable personal and vehicle protective equipment when using diagnostic
		methods and carrying out rectification activities
	P2	support the identification of faults , by reviewing vehicle:
		P2.1 technical data
		P2.2 diagnostic test procedures
	P3	prepare the vehicle systems and work area for safe working procedures as
		appropriate to the vehicle
	P4	prepare, check and use all the required equipment following manufacturers'
		instructions
	P5	use diagnostic methods which are relevant to the symptoms presented
	P6	collect sufficient diagnostic information in a logical and systematic way to
		enable an accurate diagnosis of engine system faults
	P7	accurately identify and record any system deviation from manufacturer's
		tolerances
	P8	ensure your assessment of dismantled sub-assemblies, units and components
		identifies their condition and suitability for repair or replacement
	P9	promptly inform the relevant person(s) where repairs are uneconomic or
		unsatisfactory to perform
	P10	carry out all diagnostic and rectification activities following:
		P10.1 manufacturers' instructions
		P10.2 recognised repair methods
		P10.3 your workplace procedures
		P10.4 health, safety and environmental requirements
	P11	work in a way which minimises the risk of:
		P11.1 damage to other vehicle systems
		P11.2 damage to other components and units
		P11.3 contact with leakages
		P11.4 contact with hazardous substances
	P12	ensure all repaired and replacement components and units conform to the
		vehicle operating specification and any legal requirements
	P13	adjust components and units, when necessary, correctly to ensure that they
		operate to meet system requirements

- P14 promptly record and report any additional **faults** you notice during the course of work
- P15 use testing methods which are suitable for assessing the performance of the system rectified
- P16 ensure the rectified engine system performs to the vehicle operating specification and any legal requirements prior to return to the customer
- P17 ensure your records are accurate, complete and passed to the relevant person(s) within the agreed timescale and in the format required
- P18 complete all system diagnostic activities within the agreed timescale
- P19 promptly report any anticipated delays in completion to the relevant person(s)

Knowledge and	Legislative and organisational requirements and procedures		
understanding			
You need to know	K1	the legis	slation and workplace procedures relevant to
and understand:		K1.1	health and safety
		K1.2	the environment (including waste disposal)
		K1.3	appropriate personal and vehicle protective equipment
	K2	legal red	quirements relating to the vehicle (including road safety requirements)
	K3	your wo	rkplace procedures for:
		K3.1	recording fault location and correction activities
		K3.2	reporting the results of tests
		K3.3	the referral of problems
		K3.4	reporting delays to the completion of work
	K4	the impo	ortance of working to recognised diagnostic and rectification procedures
		and pro	cesses and obtaining the correct information for diagnostic and
		rectifica	tion activities to proceed
	K5	the impo	ortance of recording diagnostic and rectification information
	K6	the impo	ortance of working to agreed timescales and keeping others informed of
		progres	S
	K7	the relat	tionship between time, costs and productivity
	K8	the impo	ortance of promptly reporting anticipated delays to the relevant
		person(s)
	Elec	trical and	d electronic principles
			al and electronic principles associated with engine systems, including
			sensors and actuators, their application and operation
	K10	how ele	ctrical and electronic engine systems operate, including electrical
		compon	ent function, electrical inputs, outputs, voltages and oscilloscope
		patterns	, digital and fibre optics principles
	K11	the inter	action between electrical, electronic and mechanical components
			ehicle engine systems
	K12	how eng	gine electrical systems interlink and interact, including multiplexing
	K13	electrica	al symbols, unit and terms
	K14	electrica	al safety procedures

Diagnose and rectify light vehicle combustion engine and component faults

K15 the hazards associated with working on or near high energy electrical vehicle components

Use of diagnostic and rectification equipment

- K16 how to prepare and check the accuracy of diagnostic testing equipment
- K17 how to use diagnostic and rectification **equipment** for engine mechanical, electrical, electronic, hydraulic/pneumatic and fluid systems; specialist engine repair tools and general workshop equipment

Combustion engine electrical faults, their diagnosis and rectification

- K18 how engine mechanical, electrical, electronic, hydraulic/pneumatic and fluid systems are constructed and operate
- K19 how engine mechanical, electrical, electronic, hydraulic/pneumatic and fluid systems are dismantled, reassembled and adjusted to manufacturers' specifications
- K20 the types and causes of engine mechanical, electrical, electronic, hydraulic/pneumatic and fluid system, component and unit **faults** and failures
- K21 engine mechanical, electrical, electronic, hydraulic/pneumatic and fluid component unit and replacement procedures, the circumstances which will necessitate replacement and other possible courses of action
- K22 how to find, interpret and use sources of information on engine electrical and electronic operating specifications, diagnostic test procedures, repair procedures and legal requirements
- K23 vehicle operating specifications for manufacturer's tolerances relating to engine mechanical, electrical, electronic, hydraulic/pneumatic and fluid systems for the vehicle(s) on which you work
- K24 how to select the most appropriate **diagnostic testing** method for the symptoms presented
- K25 how to carry out systematic **diagnostic testing** of engine mechanical, electrical, electronic, hydraulic/pneumatic and fluid systems using prescribed processes or formats
- K26 how to assess the condition of mechanical, electrical, electronic, hydraulic/pneumatic and fluid components and units

- K27 how to interpret test results and vehicle data in order to identify the location and cause of engine system **faults**
- K28 how to carry out the rectification activities in order to correct **faults** in the engine mechanical, electrical, electronic, hydraulic/pneumatic and fluid systems
- K29 the relationship between test methodology and the **faults** repaired the use of appropriate testing methods
- K30 how to make cost effective recommendations for rectification

4.2. diagnostic and rectification equipment for engine electrical systems					
 1.2. the engine electrical and electronic systems the engine hydraulic and fluid systems Diagnostic methods are measurement functional testing electrical and electronic systems testing Diagnostic testing is defined as: Verify the fault Collect further information Evaluate the evidence Carry out further tests in a logical sequence Rectify the problem Check all systems Equipment is diagnostic and rectification equipment for engine mechanical systems diagnostic and rectification equipment for engine hydraulic/pneuma and fluid systems 	Scope/range	1. Additional

Information

Diagnose and rectify light vehicle combustion engine and component faults

Glossary

This section contains examples and explanations of some of the terms used but does not form part of the standard.

Agreed timescales

Examples include: manufacturer's recommended work times, job times set by your company or a job time agreed with a specific customer.

Alternative fuel

This is defined as any type of fuel that may be used to power an internal combustion engine, examples would include LPG, bio ethanol etc.

Electrical systems

Excluding high voltage system

Diagnostic information

This relates to mechanical condition, including wear, run out, pressures and compressions, flow, leakage and electrical measurements such as voltage and pulse displays, electronic systems data, including fault codes, sensor measurements and control unit outputs and/or signals.

Engine area

Engine mechanical, cooling systems, electronic ignition, petrol fuel injection, diesel fuel injection, lubrication, engine management systems, exhaust emission reduction systems and pressure charged induction systems and starting/charging.

Engine and component faults

These are faults that require a multistage inspection and a series of test results to identify the cause.

Functional testing

Examples include: compression testing, performance testing and road testing where relevant.

Diagnose and rectify light vehicle combustion engine and component faults

Hydraulic and fluid systems

These are fuels, oil, lubrication, cooling, air conditioning.

Recommendations

Examples include: servicing, dismantling for further inspection and test, repair and replacement.

Rectification activities

These are defined as a suitable repair, replacement, re-coding or re-programming that rectifies the fault(s) identified from the diagnostic activities carried out.

Vehicles

These can be any of the following types of light vehicle: SI, CI, Hybrid, Electric or Alternative fuel vehicles.
